

BIOBLEND
INNOVATIONS LIMITED

Company Profile

Circular Manufacturing | Waste-to-Value | Alternative Energy

From Waste to Warmth, Powering Livelihoods.

Locally made solutions for farmers, households and small businesses.

Kabulonga, Lusaka, Zambia | 0777091270 | bioblendinnovations@gmail.com

Who We Are

BioBlend Innovations Limited is a Zambian circular economy and waste-to-value manufacturing enterprise based in Kabulonga, Lusaka. Established in 2023 and led by Founder & CEO Jonathan Lungu, the company transforms recovered charcoal dust and locally available inputs into practical, affordable and sustainable products for farmers, households and small businesses.

Mission

To transform locally available waste materials and agricultural by-products into affordable, practical and sustainable solutions.

Vision

To become a leading Zambian circular economy manufacturer supporting agriculture, reducing waste, creating jobs and improving livelihoods.

Jonathan Lungu

Founder & CEO, BioBlend Innovations Limited

Jonathan Lungu is the Founder and Chief Executive Officer of BioBlend Innovations Limited. At 29 years old, he represents a new generation of Zambian entrepreneurs focused on practical innovation, circular economy solutions, local manufacturing and community impact.

He has led BioBlend from an early-stage idea into an operational business with proven traction. His work is driven by a belief that valuable products can be created from materials often overlooked or discarded.

“From waste to warmth.”

A founder-led mission to create affordable energy, support farmers and create jobs.

Founder Focus Areas

- Renewable and alternative energy
- Agriculture and farmer support
- Waste-to-value manufacturing
- Youth employment and green jobs
- Market access and local value addition

Super Malasha Fire Blocks

Super Malasha Fire Blocks are long-burning charcoal briquettes made from recovered charcoal dust, clay, spent wash or molasses, and water. They are designed to provide reliable heat for poultry farmers, households, agri-shops, food vendors, braai stands and small businesses.

Key Benefits

- Burns approximately 6 to 12 hours
- Affordable alternative to ordinary charcoal
- Supports poultry brooder management
- Made from recovered charcoal dust
- Locally manufactured in Zambia

Markets & Pricing

- Poultry farmers and agri-shops
- Households and food vendors
- Braai stands and small restaurants

How BioBlend Turns Waste Into Value

1. Recover

Charcoal dust is recovered from waste streams created during charcoal handling, storage and trade.

2. Blend

Recovered material is blended with clay, spent wash or molasses, and water.

3. Mould

The mixture is shaped into fire blocks using manual moulding equipment.

4. Dry

Fire blocks are dried before being supplied to customers.

5. Supply

Products are sold to poultry farmers, households, agri-shops and small businesses.

Circularity Impact

The business keeps charcoal dust in productive use for longer by converting it into an affordable energy product.

Current Production Model

BioBlend currently operates from Plot 377A/A/1/2 Corner of Bishops and Kudu Roads, Kabulonga, Lusaka. Production is currently manual and labour-intensive, using manual fire block moulding machines, mixing tools, buckets, shovels and drying space.

Scale-Up Need

The main limitation is not market demand, but production capacity, drying infrastructure and working capital. Semi-mechanised equipment will improve output, consistency and supply reliability.

Proof That the Market Exists

50,000

Fire blocks sold

1,000+

Jobs created

3

Youth employed

Environmental Impact

- Recovers charcoal dust from waste streams
- Converts discarded material into useful fuel products
- Promotes circular manufacturing and resource efficiency
- Reduces waste accumulation and supports local value addition

Social & Economic Impact

- Supports poultry farmers with longer-burning heat
- Provides affordable fuel for households and small businesses
- Creates direct and part-time jobs
- Builds green manufacturing capacity in Zambia

The Next Two Years

BioBlend plans to move from manual production to a structured, semi-mechanised manufacturing operation. The company aims to increase production capacity, improve drying infrastructure, strengthen packaging and branding, and expand distribution through agri-shops, poultry farmers, local resellers and market networks.

Support & Partnership Needs

Equipment upgrade

Access to finance

Technical support

Business development

Market linkages

Certification support

Product testing

Working capital

Future Product Lines

Molasses packaging and distribution
Future biofertilizer development
Sustainable agricultural inputs
